

CWS/7/14 الأصل: بالإنكليزية التاريخ: 14 مايو 2019

# اللجنة المعنية بمعابير الويبو

**الدورة السابعة** جنيف، من 1 إلى 5 يوليو 2019

تنقيح معيار الويبو ST.26

وثيقة من إعداد المكتب الدولي

### مقدمة

- 1. اقترحت فرقة العمل المعنية بقوائم التسلسل، خلال الدورة السادسة للجنة المعنية بمعايير الويبو (لجنة المعايير) التي عُقدت في جنيف في 2018، سلسة من التعديلات لإدخالها على معيار الويبو ST.26 (انظر الوثيقة CWS/6/16). ومستت هذه التعديلات المتن الرئيسي للمعيار والمرفقات الأول والثاني والثالث والرابع والسادس، كما شملت إضافة مرفق سابع جديد يحتوي على خرائط التحول من معيار الويبو ST.25 إلى معيار الويبو ST.26. ووافقت لجنة المعايير على نسخة جديد للمعيار، النسخة 1.2 التي تضمنت التغييرات المقترحة المدرجة في الوثيقة CWS/6/16 مع إضافة ما يلي:
  - تغيير كلمة "Legal" في ثلاث عبارات منفصلة؛
  - تغيير كلمة "portion(s)" إلى "regions" في 15 عبارة منفصلة في المرفق السادس "وثيقة إرشادية"؛
    - إضافة الجملة التالية:
  - "ST.25 and ST.26; however, Scenario 7 contains appropriate recommendations' ابعد الجملة "ST.25 and ST.26; however, Scenario 7 contains appropriate recommendations' Recommendation for the Transformation of a Sequence "لأولى من السيناريو 9 في المرفق السابع "Listing from ST.25 to ST.26

- 2. ووافقت لجنة المعايير خلال دورتها السادسة أيضاً على تعديل وصف المهمة رقم 44 ليصبح كالآتي:
- 3. "دعم المكتب الدولي عن طريق توفير متطلبات المستخدمين وتعليقاتهم بشأن البرنامج الحاسوبي للصياغة والتثبت وفقاً للمعيار ST.26؛ ودعم المكتب الدولي في المراجعة اللاحقة للتعليمات الإدارية لمعاهدة التعاون بشأن البراءات؛ وإعداد التنقيحات اللازمة لمعيار الويبو ST.26."
  - 4. وكنتيجة لذلك، صدرت أحدث نسخة لمعيار الويبو ST.26، النسخة 1.2، في فبراير 2019.
- وعقدت فرقة العمل اجتماعين لمناقشة تنقيحات المعيار ST.26: فعُقد الأول شخصياً خلال الدورة السادسة للجنة المعايير في أكتوبر 2018، أما الثاني فقد عُقد عبر الإنترنت في أبريل 2019

ملخص التنقيحات المقترحة

# التعديلات التحريرية

- 6. في إطار المهمة رقم 44، أجرت فرقة العمل المعنية بقوائم التسلسل استعراضاً للنسخة المنشورة حالياً لمعيار الويبو ST.26 النسخة 1.2 وخلال هذا الاستعراض، كشفت فرقة العمل سلسلة من التعديلات التحريرية اللازمة، من قبيل المسافات غير اللازمة أو الأخطاء المطبعية. وكان من اللازم أيضاً إدخال تصويبات لضان أن ينعكس دليل الويبو بشأن الأسلوب التحريري على نحو مناسب في هذه الوثيقة، مثلاً التأكد من أن الاختصار اللاتيني المستخدم ليحل محل "e.g." هو دامًا "e.g."
- 7. وترد هذه التصويبات في مرفق هذه الوثيقة (المرفق الأول بمعيار الويبو ST.26) باستخدام نص مظلل باللون الأخضر لتنظر فيه لجنة المعايير خلال دورتها السابعة. وكانت هناك تعديلات تحريرية حددتها فرقة العمل في مرفقات معيار الويبو ST.26، من الأول إلى السابع، حتى وإن تضمنت هذه الوثيقة المرفق الأول فقط.

# التغييرات الجوهرية

- 8. تقترح فرقة العمل المعنية بقوائم التسلسل التغييرات التالية لمواصلة تنقيح المرفقين الأول والسابع بمعيار الويبو ST.26، على النحو المحدد في مرفق هذه الوثيقة باستخدام تظليل باللون الأصفر بالنسبة للإضافات واللون الأرجواني بالنسبة لما يُقترح حذفه. ولا تُقترح أي تغييرات جوهرية في المتن الرئيسي لمعيار الويبو ST.26:
  - (أ) تحديث الجدول 9 من المرفق الأول لدمج التحديثات المقدمة في النسخة 10.8 من جدول سيات قاعدة البيانات الدولية لتسلسل النوويدات (INSDC)؛
    - (ب) تحديث القسم 5.27 من المرفق الأول، ليشمل المعرّفات الاختيارية الإضافية التالية:

- function
  - gene
- gene\_synonym
  - map –
- (ج) تحديث القسم 5.33 من المرفق الأول، ليشمل المعرّفات الاختيارية الإضافية التالية:
  - allele –
  - direction
    - gene –
  - gene\_synonym
    - шар –
    - note -
  - standard name -
  - (د) تحديث القسم 5.43 من المرفق الأول، ليشمل المعرّف الاختياري الإضافي التالي:

## operon

- ه) تحديث القسم 6.16 من المرفق الأول، ليشمل الأعمدة الأفقية الإضافية التالية:
  - في العمود "Example" إضافة:
- في العمود "Comment" إضافة النص التالي: "Symbols including an "n", e.g. "n", "n1" إضافة النص التالي: "and so on."
  - (و) تحديث الفقرة الثالثة من المرفق السابع " Recommendations for potential added or". ويشير "transformation' إلى 'conversion'. ويشير المصطلح 'conversion' إلى 'conversion'. ويشير المصطلح 'conversion' إلى تقابل فردي بين المكونات وذلك غير صحيح من الناحية التقنية.
- (ز) تحديث الرقم 24 من السيناريو 8 في المرفق السابع: تغيير مصطلح 'SITE' إلى 'REGION'. واقترح هذا التغيير المبتكرون الذين أشاروا إلى وجود تعارض بين المواصفات الوظيفية التي تحدد تنزيل التسلسل في المعيار ST.25 والمثال التالى؛ أنساق XML كملف منفصل.
  - و. وتقترح فرقة العمل كذلك، بما يتماشى مع التعديلات المقترحة في معايير الويبو الأخرى، أن تقدم محتويات المرفق الثالث لمعيار الويبو ST.26، وهما بنسق XML، في ملفين منفصلين وأنه ينبغي أن يتضمن المعيار رابطاً لهذين الملفين. ومن المتوقع أن تكون هذه الأمثلة متاحة بقدر أكبر لقرّاء المعيار.
    - 10. وللمزيد من المعلومات بشأن هذه التغييرات، يُرجى الاطلاع على المرفق.

11. إن لجنة المعايير مدعوة إلى ما يلي:

(أ) الإحاطة علم بحتوى هذه الوثيقة؛

(ب) وأن تنظر وتبت في اعتاد المراجعة المقترحة لمعيار ST.26، على النحو الوارد في الفقرات من 4 إلى 6

أعلاه، والمرفقين الأول والثاني بهذه الوثيقة؛

(ج) وأن تنظر وتوافق على اقتراح تقديم محتوى المرفق الثالث وتذييل المرفق السابع بمعيار الويبو ST.26 في ملفين منفصلين يحتويان على رابط إلى المعيار، على النحو المشار إليه في الفقرة 7 أعلاه.

[يلي ذلك المرفق (المرفق الأول بالمعيار ST.26)]

## ST.26 - ANNEX I

## CONTROLLED VOCABULARY

Version 1.23

Revision approved by the Committee on WIPO Standards (CWS) at its sixth session on October 19, 2018 Proposal presented by the SEQL Task Force for consideration and approval at the CWS/7

# TABLE OF CONTENTS

SECTION 1: LIST OF NUCLEOTIDES	2
SECTION 2: LIST OF MODIFIED NUCLEOTIDES	
SECTION 3: LIST OF AMINO ACIDS	4
SECTION 4: LIST OF MODIFIED AMINO ACIDS	5
SECTION 5: FEATURE KEYS FOR NUCLEOTIDE SEQUENCES	6
SECTION 6: QUALIFIERS FOR NUCLEOTIDE SEQUENCES	23
SECTION 7: FEATURE KEYS FOR AMINO ACID SEQUENCES	46
SECTION 8: QUALIFIERS FOR AMINO ACID SEQUENCES	53
SECTION 9: GENETIC CODE TABLES	54

#### SECTION 1: LIST OF NUCLEOTIDES

The nucleotide base codes to be used in sequence listings are presented in Table 1. The symbol "t" will be construed as thymine in DNA and uracil in RNA when it is used with no further description. Where an ambiguity symbol (representing two or more bases in the alternative) is appropriate, the most restrictive symbol should be used. For example, if a base in a given position could be "a or g," then "r" should be used, rather than "n". The symbol "n" will be construed as "a or c or g or t/u" when it is used with no further description.

Table 1: List of nucleotides

Symbol	Nucleotide
а	adenine
С	cytosine
g	guanine
t	thymine in DNA/uracil in RNA (t/u)
m	a or c
r	a or g
W	a or t/u
S	c or g
У	c or t/u
k	g or t/u
V	a or c or g; not t/u
h	a or c or t/u; not g
d	a or g or t/u; not c
b	c or g or t/u; not a
n	a or c or g or t/u; "unknown" or "other"

#### SECTION 2: LIST OF MODIFIED NUCLEOTIDES

The abbreviations listed in Table 2 are the only permitted values for the mod\_base qualifier. Where a specific modified nucleotide is not present in the table below, then the abbreviation "OTHER" must be used as its value. If the abbreviation is "OTHER", then the complete unabbreviated name of the modified base must be provided in a note qualifier. The abbreviations provided in Table 2 must not be used in the sequence itself.

Table 2: List of modified nucleotides

Abbreviation	Modified Nucleotide
ac4c	4-acetylcytidine
chm5u	5-(carboxyhydroxylmethyl)uridine
cm	2'-O-methylcytidine
cmnm5s2u	5-carboxymethylaminomethyl-2-thiouridine
cmnm5u	5-carboxymethylaminomethyluridine
dhu	dihydrouridine
fm	2'-O-methylpseudouridine
gal q	beta-D-galactosylqueuosine
gm	2'-O-methylguanosine
i	inosine
i6a	N6-isopentenyladenosine
m1a	1-methyladenosine
m1f	1-methylpseudouridine
m1g	1-methylguanosine
m1i	1-methylinosine
m22g	2,2-dimethylguanosine
m2a	2-methyladenosine
m2g	2-methylguanosine
m3c	3-methylcytidine
m4c	N4-methylcytosine
m5c	5-methylcytidine
m6a	N6-methyladenosine

Abbreviation	Modified Nucleotide
m7g	7-methylguanosine
mam5u	5-methylaminomethyluridine
mam5s2u	5-methylaminomethyl-2-thiouridine
man q	beta-D-mannosylqueuosine
mcm5s2u	5-methoxycarbonylmethyl-2-thiouridine
mcm5u	5-methoxycarbonylmethyluridine
mo5u	5-methoxyuridine
ms2i6a	2-methylthio-N6-isopentenyladenosine
ms2t6a	N-((9-beta-D-ribofuranosyl-2-methylthiopurine-6-yl)carbamoyl)threonine
mt6a	N-((9-beta-D-ribofuranosylpurine-6-yl)N-methyl-carbamoyl)threonine
mv	uridine-5-oxoacetic acid-methylester
o5u	uridine-5-oxyacetic acid (v)
osyw	wybutoxosine
р	pseudouridine
q	queuosine
s2c	2-thiocytidine
s2t	5-methyl-2-thiouridine
s2u	2-thiouridine
s4u	4-thiouridine
m5u	5-methyluridine
t6a	N-((9-beta-D-ribofuranosylpurine-6-yl)carbamoyl)threonine
tm	2'-O-methyl-5-methyluridine
um	2'-O-methyluridine
yw	wybutosine
х	3-(3-amino-3-carboxypropyl)uridine, (acp3)u
OTHER	(requires note qualifier)

#### SECTION 3: LIST OF AMINO ACIDS

The amino acid codes to be used in sequence are presented in Table 3. Where an ambiguity symbol (representing two or more amino acids in the alternative) is appropriate, the most restrictive symbol should be used. For example, if an amino acid in a given position could be aspartic acid or asparagine, the symbol "B" should be used, rather than "X". The symbol "X" will be construed as any one of "A", "R", "N", "D", "C", "Q", "E", "G", "H", "I", "L", "K", "M", "F", "P", "O", "S", "U", "T", "W", "Y", or "V", when it is used with no further description.

Table 3: List of amino acids

Symbol	Amino acid
А	Alanine
R	Arginine
N	Asparagine
D	Aspartic acid (Aspartate)
С	Cysteine
Q	Glutamine
Е	Glutamic acid (Glutamate)
G	Glycine
Н	Histidine
I	Isoleucine
L	Leucine
K	Lysine
М	Methionine
F	Phenylalanine
Р	Proline
0	Pyrrolysine
S	Serine
U	Selenocysteine
Т	Threonine
W	Tryptophan
Υ	Tyrosine
V	Valine
В	Aspartic acid or Asparagine
Z	Glutamine or Glutamic acid
J	Leucine or Isoleucine
×	A or R or N or D or C or Q or E or G or H or I or L or K or M or F or P or O or S or U or T or W or Y or V; "unknown" or "other"

### SECTION 4: LIST OF MODIFIED AMINO ACIDS

Table 4 lists the only permitted abbreviations for a modified amino acid in the mandatory qualifier "NOTE" for feature keys "MOD\_RES" or "SITE". The value for the qualifier "NOTE" must be either an abbreviation from this table, where appropriate, or the complete, unabbreviated name of the modified amino acid. The abbreviations (or full names) provided in this table must not be used in the sequence itself.

Table 4: List of modified amino acids

Abbreviation	Modified Amino acid
Aad	2-Aminoadipic acid
bAad	3-Aminoadipic acid
bAla	beta-Alanine, beta-Aminoproprionic acid
Abu	2-Aminobutyric acid
4Abu	4-Aminobutyric acid, piperidinic acid
Acp	6-Aminocaproic acid
Ahe	2-Aminoheptanoic acid
Aib	2-Aminoisobutyric acid
bAib	3-Aminoisobutyric acid
Apm	2-Aminopimelic acid
Dbu	2,4-Diaminobutyric acid
Des	Desmosine
Dpm	2,2'-Diaminopimelic acid
Dpr	2,3-Diaminoproprionic acid
EtGly	N-Ethylglycine
EtAsn	N-Ethylasparagine
Hyl	Hydroxylysine
aHyl	allo-Hydroxylysine
ЗНур	3-Hydroxyproline
4Нур	4-Hydroxyproline
Ide	Isodesmosine
alle	allo-Isoleucine
MeGly	N-Methylglycine, sarcosine
Melle	N-Methylisoleucine
MeLys	6-N-Methyllysine
MeVal	N-Methylvaline
Nva	Norvaline
Nle	Norleucine
Orn	Ornithine

### SECTION 5: FEATURE KEYS FOR NUCLEOTIDE SEQUENCES

This section contains the list of allowed feature keys to be used for nucleotide sequences, and lists mandatory and optional qualifiers. The feature keys are listed in alphabetic order. The feature keys can be used for either DNA or RNA unless otherwise indicated under "Molecule scope". Certain Feature Keys may be appropriate for use with artificial sequences in addition to the specified "organism scope".

Feature key names must be used in the XML instance of the sequence listing exactly as they appear following "Feature key" in the descriptions below, except for the feature keys 3'UTR and 5'UTR. See "Comment" in the description for the 3'UTR and 5'UTR feature keys.

5.1.	Feature Key	C_region
	Definition	constant region of immunoglobulin light and heavy chains, and T-cell receptor alpha, beta, and gamma chains; includes one or more exons depending on the particular chain
	Optional qualifiers	al l el e
		gene
		gene_synonym
		тар
		note
		product
		pseudo
		pseudogene
		standard_name
	Organism scope	eukaryotes
5.2.	Feature Key	CDS
	Definition	coding sequence; sequence of nucleotides that corresponds with the sequence of
		amino acids in a protein (location includes stop codon); feature may include amino
		acid conceptual translation
	Optional qualifiers	allele
		codon_start
		EC_number
		exception
		function
		gene
		gene_synonym
		тар
		note
		number
		operon
		product
		protein_id
		pseudo
		pseudogene
		ri bosomal_sli ppage
		standard_name
		translation
		transl_except
		transl_table trans_splicing
	Comment	and on at out qualifier has valid value of 1 on 2 on 2 indicating the office of
	Comment	codon_start qualifier has valid value of 1 or 2 or 3, indicating the offset at which the first complete codon of a coding feature can be found, relative to the
		first base of that feature; transl_table defines the genetic code table used if
		other than the Standard or universal genetic code table; genetic code exceptions
		outside the range of the specified tables are reported in transl_except qualifier;
		only one of the qualifiers translation, pseugogene or pseudo are permitted with a
		CDS feature key; when the translation qualifier is used, the protein_id qualifier

ami no aci ds

is mandatory if the translation product contains four or more specifically defined

5.3.	Feature Key	centromere
	Definition	$\label{lem:continuous} \begin{picture}(20,20) \put(0,0){\line(0,0){100}} \put(0,0){\line(0,0){100}$
	Optional qualifiers	note standard_name
	Comment	the centromere feature describes the interval of DNA that corresponds to a region where chromatids are held and a kinetochore is formed
5.4.	Feature Key	D-1 oop
	Definition	displacement loop; a region within mitochondrial DNA in which a short stretch of RNA is paired with one strand of DNA, displacing the original partner DNA strand in this region; also used to describe the displacement of a region of one strand of duplex DNA by a single stranded invader in the reaction catalyzed by RecA protein
	Optional qualifiers	allele gene gene_synonym map note
	Molecule scope	DNA
5.5.	Feature Key	D_segment
	Definition	Diversity segment of immunoglobulin heavy chain, and T-cell receptor beta chain
	Optional qualifiers	allele gene gene_synonym map note product pseudo pseudogene standard_name
	Organism scope	eukaryotes
5.6.	Feature Key	exon
	Definition	region of genome that codes for portion of spliced mRNA, rRNA and tRNA; may contain 5'UTR, all CDSs and 3' UTR
	Optional qualifiers	allele EC_number function gene gene_synonym map note number product pseudo pseudogene standard_name trans_splicing

5.7.	Feature Key	gene
	Definition	$\ensuremath{region}$ of biological interest identified as a gene and for which a name has been assigned
	Optional qualifiers	allele function
		gene
		gene_synonym map
		note
		operon
		product
		pseudo
		pseudogene phenotype
		standard_name
		trans_splicing
	Comment	the gene feature describes the interval of DNA that corresponds to a genetic trait or phenotype; the feature is, by definition, not strictly bound to its positions at the ends; it is meant to represent a region where the gene is located.
5.8.	Feature Key	i DNA
	Definition	intervening DNA; DNA which is eliminated through any of several kinds of recombination
	Optional qualifiers	allele
		function
		gene
		gene_synonym map
		note
		number
		standard_name
	Molecule scope	DNA
	Comment	e.g. $\underline{{\bf r}}$ in the somatic processing of immunoglobulin genes.
5.9.	Feature Key	intron
	Definition	a segment of DNA that is transcribed, but removed from within the transcript by
		splicing together the sequences (exons) on either side of it
	Optional qualifiers	al l el e
		function
		gene
		gene_synonym map
		note
		number
		pseudo
		pseudogene
		standard_name trans_splicing
		erano_oprrering

5.10.	Feature Key	J_segment
	Definition	joining segment of immunoglobulin light and heavy chains, and T-cell receptor alpha, beta, and gamma chains
	Optional qualifiers	allele gene gene_synonym map note product pseudo pseudogene standard_name
	Organism scope	eukaryotes
5.11.	Feature Key	mat_peptide
	Definition	mature peptide or protein coding sequence; coding sequence for the mature or final peptide or protein product following post-translational modification; the location does not include the stop codon (unlike the corresponding CDS)
	Optional qualifiers	allele EC_number function gene gene_synonym map note product pseudo pseudogene standard_name
5.12.	Feature Key	mi sc_bi ndi ng
	Definition	site in nucleic acid which covalently or non-covalently binds another moiety that cannot be described by any other binding key (primer_bind or protein_bind)
	Mandatory qualifiers	bound_moiety
	Optional qualifiers	allele function gene gene_synonym map note
	Comment	note that the regulatory feature key and regulatory_class qualifier with the value "ribosome_binding_site" must be used for describing ribosome binding sites

5.13. Feature Key

3.13.	reacure key	iii se_ui i rerenee
	Definition	featured sequence differs from the presented sequence at this location and cannot be described by any other Difference key (variation, or modified_base)
	Optional qualifiers	allele clone compare gene
		gene_synonym map
		note
		phenotype repl ace
		standard_name
	Comment	the miss difference feature key must be used to describe variability introduced
	Comment	the misc_difference feature key must be used to describe variability introduced artificially, e.g. by genetic manipulation or by chemical synthesis; use the
		replace qualifier to annotate a deletion, insertion, or substitution. The variation feature key must be used to describe naturally occurring genetic variability.
5.14.	Feature Key	misc_feature
	Definition	region of biological interest which cannot be described by any other feature key; a new or rare feature
	Optional qualifiers	al l el e
		function
		gene
		gene_synonym
		map note
		number
		phenotype
		product
		pseudo
		pseudogene
		standard_name
	Comment	this key should not be used when the need is merely to mark a region in order to comment on it or to use it in another feature's location
F 15	Eastern Ver	
5.15.	Feature Key	mi sc_recomb
	Definition	site of any generalized, site-specific or replicative recombination event where there is a breakage and reunion of duplex DNA that cannot be described by other
		recombination keys or qualifiers of source key (proviral)
	Optional qualifiers	al l el e
	- ·	gene
		gene_synonym
		шар
		note
		recombination_class
		standard_name
	Mol ecul e scope	DNA

misc\_difference

5.16.	Feature Key	mi sc_RNA
	Definition	any transcript or RNA product that cannot be defined by other RNA keys (prim_transcript, precursor_RNA, mRNA, 5'UTR, 3'UTR, exon, CDS, sig_peptide, transit_peptide, mat_peptide, intron, polyA_site, ncRNA, rRNA and tRNA)
	Optional qualifiers	allele function gene gene_synonym map note operon product pseudo pseudogene standard_name trans_splicing
5.17.	Feature Key	mi sc_structure
	Definition	any secondary or tertiary nucleotide structure or conformation that cannot be described by other Structure keys (stem_loop and D-loop)
	Optional qualifiers	allele function gene gene_synonym map note standard_name
5.18.	Feature Key	mobile_element
5.10.	Definition	region of genome containing mobile elements
	Mandatory qualifiers	mobile_element_type
	Optional qualifiers	allele function gene gene_synonym map note rpt_family rpt_type standard_name
5.19.	Feature Key	modified_base
3.13.	Definition	the indicated nucleotide is a modified nucleotide and should be substituted for by the indicated molecule (given in the mod_base qualifier value)
	Mandatory qualifiers	mod_base
	Optional qualifiers	allele frequency gene gene_synonym map note
	Comment	value for the mandatory $mod\_base$ qualifier is limited to the restricted vocabulary for modified base abbreviations in Section 2 of this Annex.

Feature Key

mRNA

5.20.

Definition messenger RNA; includes 5' untranslated region (5'UTR), coding sequences (CDS, exon) and 3' untranslated region (3'UTR) Optional qualifiers al l el e function gene gene\_synonym map note operon product pseudo pseudogene standard\_name trans\_splicing 5.21. Feature Key ncRNA Definition a non-protein-coding gene, other than ribosomal RNA and transfer RNA, the  $\,$ functional  $\mbox{molecule}$  of  $\mbox{which}$  is the RNA transcript Mandatory qualifiers ncRNA\_cl ass Optional qualifiers allele function gene gene\_synonym map note operon product pseudo pseudogene standard\_name trans\_splicing Comment the ncRNA feature must not be used for ribosomal and transfer RNA annotation, for which the rRNA and tRNA feature keys must be used, respectively 5.22. Feature Key N\_regi on Definition extra nucleotides inserted between rearranged immunoglobulin segments Optional qualifiers al l el e gene gene\_synonym map  $\quad \text{not}\, e$ product pseudo pseudogene standard\_name Organism scope eukaryotes

5.23. Feature Key

operon

Definition  $region\ containing\ polycistronic\ transcript\ including\ a\ cluster\ of\ genes\ that\ are$ under the control of the same regulatory sequences/promoter and in the same biological pathway Mandatory qualifiers operon Optional qualifiers al l el e function map note phenotype pseudo pseudogene standard\_name 5.24. Feature Key Definition origin of transfer; region of a DNA molecule where transfer is initiated during the process of conjugation or mobilization Optional qualifiers al l el e bound\_moiety di recti on gene gene\_synonym map  $\mathbf{not}\,\mathbf{e}$  $rpt\_fami\,l\,y$ rpt\_type rpt\_uni t\_range rpt\_uni t\_seq standard\_name Molecule Scope DNA Comment  ${\tt rep\_origin\ must\ be\ used\ to\ describe\ origins\ of\ replication;\ direction\ qualifier\ has}$ permitted values left, right, and both, however only left and right are valid when used in conjunction with the oriT feature; origins of transfer can be present in the chromosome; plasmids can contain multiple origins of transfer 5.25. Feature Key polyA\_site site on an RNA transcript to which will be added adenine residues by post-Definition  $transcriptional\ polyadenylation$ Optional qualifiers allele gene gene\_synonym map note eukaryotes and eukaryotic viruses Organism scope

5.26.	Feature Key	precursor_RNA
	Definition	any RNA species that is not yet the mature RNA product; may include ncRNA, rRNA, tRNA, 5' untranslated region (5'UTR), coding sequences (CDS, exon), intervening sequences (intron) and 3' untranslated region (3'UTR)
	Optional qualifiers	allele function
		gene gene_synonym
		map
		note
		operon
		product
		standard_name trans_splicing
		0
	Comment	used for RNA which may be the result of post-transcriptional processing; if the RNA in question is known not to have been processed, use the prim_transcript key
5.27.	Feature Key	prim_transcript
	Definition	primary (initial, unprocessed) transcript; may include ncRNA, rRNA, tRNA, 5' untranslated region (5'UTR), coding sequences (CDS, exon), intervening sequences (intron) and 3' untranslated region (3'UTR)
	Optional qualifiers	allele  function  gene  gene synonym
		map note
		operon
		standard_name
5.28.	Feature Key	pri mer_bi nd
3.20.	reacure ney	primer_bring
	Definition	non-covalent primer binding site for initiation of replication, transcription, or reverse transcription; includes site(s) for synthetic e.g. $\blacksquare$ PCR primer elements
	Optional qualifiers	allele gene
		gene_synonym
		map note
		standard_name
	Comment	used to annotate the site on a given sequence to which a primer molecule binds - not intended to represent the sequence of the primer molecule itself; since PCR reactions most often involve pairs of primers, a single primer_bind key may use the order(location, location) operator with two locations, or a pair of primer_bind keys may be used

Feature Key

5.29.

Definition propeptide coding sequence; coding sequence for the domain of a proprotein that is cleaved to form the mature protein product. Optional qualifiers al l el e function gene gene\_synonym map note productpseudo pseudogene standard\_name 5.30. Feature Key protei n\_bi nd Definition non-covalent protein binding site on nucleic acid Mandatory qualifiers bound\_moiety Optional qualifiers al l el e function gene\_synonym map note operon standard\_name Comment note that the regulatory feature key and regulatory\_class qualifier with the value  $"ri\,bosome\_bi\,ndi\,ng\_si\,te"\ must\ be\ used\ to\ describe\ ri\,bosome\ bi\,ndi\,ng\ si\,tes$ 5.31. Feature Key regul atory Definition any region of a sequence that functions in the regulation of transcription, translation, replication or chromatin structure; Mandatory qualifiers regulatory\_class Optional qualifiers al l el e bound\_moiety function gene  $gene\_synonym$ map note operon phenotype pseudo pseudogene standard\_name

propepti de

5.32. Feature Key repeat\_region Definition  $\label{lem:region} \textit{region of genome containing repeating units}$ Optional qualifiers allele function gene gene\_synonym map note rpt\_family  $rpt\_type$ rpt\_uni t\_range rpt\_uni t\_seq satellite standard\_name 5.33. Feature Key rep\_ori gi n origin of replication; starting site for duplication of nucleic acid to give two Definition identical copies Optional Qualifiers al l el e di recti on <u>function</u> gene gene\_synonym map standard\_name Comment direction qualifier has valid values: left, right, or both rRNA 5.34. Feature Key Definition mature ribosomal RNA; RNA component of the ribonucleoprotein particle (ribosome) which assembles amino acids into proteins Optional qualifiers al l el e function gene gene\_synonym map note operon product pseudo pseudogene standard\_name Comment  $rRNA \ sizes \ should \ be \ annotated \ with \ the \ product \ qualifier$ 

5.35. Feature Key S\_regi on Definition switch region of immunoglobulin heavy chains; involved in the rearrangement of heavy chain DNA leading to the expression of a different immunoglobulin class from the same B-cell Optional qualifiers al l el e gene gene\_synonym map note productpseudo pseudogene standard\_name Organism scope eukaryotes 5.36. Feature Key si g\_pepti de Definition signal peptide coding sequence; coding sequence for an N-terminal domain of a secreted protein; this domain is involved in attaching mascent polypeptide to the membrane leader sequence Optional qualifiers al l el e functiongene gene\_synonym map note productpseudo pseudogene

standard\_name

5.37. Feature Key

source

Definition identifies the source of the sequence; this key is mandatory; every sequence will have a single source key spanning the entire sequence Mandatory qualifiers organi sm mol\_type Optional qualifiers cell\_line cell\_type chromosome cl one cl one\_l i b collected\_by collection\_date cul ti var dev\_stage ecotype environmental\_sample germl i ne hapl ogroup  $hapl\,otype$ host i dent i fi ed\_by i sol ate isolation\_source lab\_host lat\_lon macronuclear map mating\_type note organel l e PCR\_pri mers pl asmi d pop\_vari ant provi ral rearranged segment serotype serovar sex strain sub\_cl one sub\_speci es sub\_strain tissue\_lib tissue\_type vari ety Molecule scope any 5.38. Feature Key stem\_loop Definition hairpin; a double-helical region formed by base-pairing between adjacent (inverted) complementary sequences in a single strand of RNA or DNA  $\,$ Optional qualifiers allele function gene gene\_synonym map note operon

standard\_name

5.39. Feature Key

Definition sequence tagged site; short,  $\operatorname{single-copy}$  DNA sequence that characterizes a mapping landmark on the genome and can be detected by PCR; a region of the genome can be mapped by determining the order of a series of STSs  $\,$ Optional qualifiers al l el e gene  $gene\_synonym$ map note standard\_name Molecule scope DNA STS location to include primer(s) in primer\_bind key or primers Comment 5.40. Feature Key telomere Definition region of biological interest identified as a telomere and which has been experimentally characterized Optional qualifiers note rpt type rpt\_uni t\_range rpt\_uni t\_seq standard\_name Comment the telomere feature describes the interval of DNA that corresponds to a specific structure at the end of the linear eukaryotic chromosome which is required for the integrity and maintenance of the end; this region is unique compared to the rest of the chromosome and represents the physical end of the chromosome 5.41. Feature Key tmRNA Definition transfer messenger RNA; tmRNA acts as a tRNA first, and then as an mRNA that encodes a peptide tag; the ribosome translates this  $\ensuremath{\mathtt{mRNA}}$  region of  $\ensuremath{\mathsf{tmRNA}}$  and attaches the encoded peptide tag to the C-terminus of the unfinished protein; this attached tag targets the protein for destruction or proteolysis Optional qualifiers allele function gene gene\_synonym map note product pseudo pseudogene standard name

tag\_peptide

5.42. Feature Key transit\_peptide

> Definition  $transit\ pepti\,de\ coding\ sequence;\ coding\ sequence\ for\ an\ N\text{-termi}\,nal\ domai\, n\ of\ a$

nuclear-encoded organellar protein; this domain is involved in post-translational

 $i\, mport \ of \ the \ protein \ into \ the \ organelle$ 

Optional qualifiers al l el e

function gene

gene\_synonym

map note product pseudo pseudogene standard\_name

5.43. Feature Key t RNA

> Definition mature transfer RNA, a small RNA molecule (75-85 bases long) that mediates the

 $translation\ of\ a\ nucleic\ acid\ sequence\ into\ an\ amino\ acid\ sequence$ 

Optional qualifiers al l el e

> anti codon functiongene

gene\_synonym

map note <u>operon</u> product pseudo pseudogene standard\_name  $trans\_splicing$ 

5.44.	Feature Key	unsure
	Definition	a small region of sequenced bases, generally 10 or fewer in its length, which could not be confidently identified. Such a region might contain called bases (a, t, g, or c), or a mixture of called-bases and uncalled-bases ('n').
	Optional qualifiers	allele
		compare
		gene
		gene_synonym
		map note
		repl ace
	Comment	use the replace qualifier to annotate a deletion, insertion, or substitution.
5.45.	Feature Key	V_regi on
	Definition	variable region of immunoglobulin light and heavy chains, and T-cell receptor alpha, beta, and gamma chains; codes for the variable amino terminal portion; can
		be composed of V_segments, D_segments, N_regions, and J_segments
	Optional qualifiers	allele
		gene
		gene_synonym
		тар
		note
		product pseudo
		pseudogene
		standard_name
	Organism scope	eukaryotes
5.46.	Feature Key	V_segment
	Definition	vanishle cognent of immunoglobulin light and beauty chains, and T call recentor
	Del I III CI OII	variable segment of immunoglobulin light and heavy chains, and T-cell receptor alpha, beta, and gamma chains; codes for most of the variable region (V_region) and
		the last few amino acids of the leader peptide
	Optional qualifiers	allele
		gene
		gene_synonym
		тар
		note
		product
		pseudo pseudogene
		standard_name
	Organism scope	eukaryotes

5.47.	Feature Key	variation
	Definition	a related strain contains stable mutations from the same gene (e.g. $\blacksquare$ RFLPs, polymorphisms, etc.) which differ from the presented sequence at this location (and possibly others)
	Optional qualifiers	allele compare frequency gene gene_synonym map note phenotype product replace standard_name
	Comment	used to describe alleles, RFLP's, and other naturally occurring mutations and polymorphisms; use the replace qualifier to annotate a deletion, insertion, or substitution; variability arising as a result of genetic manipulation (e.g. site directed mutagenesis) must be described with the misc_difference feature
E 40	Facture Vo.	3' UTR
5.48.	Feature Key Definition	1) region at the 3' end of a mature transcript (following the stop codon) that is not translated into a protein; 2) region at the 3' end of an RNA virus (following the last stop codon) that is not translated into a protein;
	Optional qualifiers	allele function gene gene_synonym map note standard_name trans_splicing
	Comment	The apostrophe character has special meaning in XML, and must be substituted with "'" in the value of an element. Thus "3'UTR" must be represented as "3' UTR" in the XML file, i.e., <insdfeature_key>3' UTR</insdfeature_key> .
5.49.	Feature Key	5' UTR
	Definition	<ol> <li>region at the 5' end of a mature transcript (preceding the initiation codon) that is not translated into a protein;</li> <li>region at the 5' end of an RNA virus (preceding the first initiation codon) that is not translated into a protein;</li> </ol>
	Optional qualifiers	allele function gene gene_synonym map note standard_name trans_splicing
	Comment	The apostrophe character has special meaning in XML, and must be substituted with "'" in the value of an element. Thus "5'UTR" must be represented as "5' UTR" in the XML file, i.e., <insdfeature_key>5' UTR</insdfeature_key> .

### SECTION 6: QUALIFIERS FOR NUCLEOTIDE SEQUENCES

This section contains the list of qualifiers to be used for features in nucleotide sequences. The qualifiers are listed in alphabetic order.

Where a Value format of "none" is indicated in the description of a qualifier (e.g. germline), the INSDQualifier\_value element must not be used.

PLEASE NOTE: Any qualifier value provided for a qualifier with a "free text" value format may require translation for National/Regional procedures.

6. 1.	Qual i fi er	allele
0. 1.	quarifici	
	Definition	name of the allele for the given gene
	Value format	free text
	varue rormae	(NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>adh1-1</insdqualifier_value>
	Comment	all gene-related features (exon, CDS etc) for a given gene should share the same allele qualifier value; the allele qualifier value must, by definition, be different from the gene qualifier value; when used with the variation feature key, the allele qualifier value should be that of the variant.
6. 2.	Qualifier	anticodon
	Definition	location of the anticodon of tRNA and the amino acid for which it codes
	Delinition	rocation of the anticodon of trava and the amino acid for which it codes
	Value format	(pos: <location>, aa:<amino_acid>, seq:<text>) where <location> is the position of the anticodon and <amino_acid> is the three letter abbreviation for the amino acid encoded and <text> is the sequence of the anticodon</text></amino_acid></location></text></amino_acid></location>
	Example	<pre><insdqualifier_value>(pos: 3436, aa: Phe, seq: aaa) </insdqualifier_value> <insdqualifier_value>(pos: join(5, 495496), aa: Leu, seq: taa) </insdqualifier_value> <insdqualifier_value>(pos: complement(41564158), aa: Glu, seq: ttg) </insdqualifier_value> ue&gt;</pre>
6. 3.	Qualifier	bound_moi ety
	Definition	name of the molecule/complex that may bind to the given feature
	Value format	free text
		(NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>GAL4</insdqualifier_value>
	Comment	A single bound_moiety qualifier is permitted on the "misc_binding", "oriT" and "protein_bind" features.
6. 4.	Qualifier	cell_line
	Definition	cell line from which the sequence was obtained
		·
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>MCF7</insdqualifier_value>

6. 5.	Qual i fi er	cell_type
	Definition	cell type from which the sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>leukocyte</insdqualifier_value>
6. 6.	Qualifier	chromosome
	Definition	chromosome (e.g. L Chromosome number) from which the sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<i er_val="" fi="" i="" nsdqual="" ue="">1</i> <i er_val="" fi="" i="" nsdqual="" ue="">X</i>
6. 7.	Qualifier	clone
	Definition	clone from which the sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>lambda-hIL7.3</insdqualifier_value>
	Comment	a source feature must not contain more than one clone qualifier; where the sequence was obtained from multiple clones it may be further described in the feature table using the feature key misc_feature and a note qualifier to specify the multiple clones.
6. 8.	Qual i fi er	clone_lib
	Definition	clone library from which the sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>lambda-hIL7</insdqualifier_value>
6. 9.	Qualifier	codon_start
	Definition	indicates the offset at which the first complete codon of a coding feature can be found, relative to the first base of that feature.
	Value format	1 or 2 or 3
	Exampl e	<i er_val="" fi="" i="" nsdqual="" ue="">2</i>
6. 10.	Qual i fi er	collected_by
	Definition	name of persons or institute who collected the specimen
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>Dan Janzen</insdqualifier_value>

6. 11.	Qual i fi er	collection_date
	•	
	Definition	date that the specimen was collected.
	Value Comment	NAVAY NAC DD. NAVAY NAC NAVAY
	Value format	YYYY-MM-DD, YYYY-MM or YYYY
	Example	<pre><insdqualifier_value>1952-10-21</insdqualifier_value></pre>
		<insdqualifier_value>1952-10</insdqualifier_value> <insdqualifier_value>1952</insdqualifier_value>
	Comment	'YYYY' is a four-digit value representing the year. 'MM' is a two-digit value representing the month. 'DD' is a two-digit value representing the day of the month.
6. 12.	Qualifier	compare
0. 12.	•	
	Definition	Reference details of an existing public INSD entry to which a comparison is made
	Value format	[accessi on-number. sequence-versi on]
	Exampl e	<i er_val="" fi="" i="" nsdqual="" ue="">AJ634337. 1</i>
	Comment	This qualifier may be used on the following features: misc_difference, unsure, and variation. Multiple compare qualifiers with different contents are allowed within a single feature. This qualifier is not intended for large-scale annotation of variations, such as SNPs.
6. 13.	Qualifier	cul ti var
	Definition	cultivar (cultivated variety) of plant from which sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>Nipponbare</insdqualifier_value>
		<pre><insdqualifier_value>Tenuifolius</insdqualifier_value> <insdqualifier_value>Candy Cane</insdqualifier_value></pre>
		<pre><insdqualifier_value>IR36</insdqualifier_value></pre>
	Comment	'cultivar' is applied solely to products of artificial selection; use the variety qualifier for natural, named plant and fungal varieties.
6. 14.	Qual i fi er	dev_stage
	Definition	if the sequence was obtained from an organism in a specific developmental stage, it is specified with this qualifier
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>fourth instar larva</insdqualifier_value></pre>

6.15. Qualifier

di recti on

6. 15.	quairrier	direction
	Definition	direction of DNA replication
	Value format	left, right, or both where left indicates toward the 5' end of the sequence (as presented) and right indicates toward the 3' end
	Exampl e	<pre><insdqualifier_value>left</insdqualifier_value></pre>
	Comment	The values left, right, and both are permitted when the direction qualifier is used to annotate a rep_origin feature key. However, only left and right values are permitted when the direction qualifier is used to annotate an oriT feature key.
6. 16.	Qual i fi er	EC_number
	Definition	Enzyme Commission number for enzyme product of sequence
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>1. 1. 2. 4</insdqualifier_value> <insdqualifier_value>1. 1. 2</insdqualifier_value> <insdqualifier_value>1. 1. 2. n</insdqualifier_value> <insdqualifier_value>1. 1. 2. n</insdqualifier_value></pre>
	Comment	valid values for EC numbers are defined in the list prepared by the Nomenclature Committee of the International Union of Biochemistry and Molecular Biology (NC-IUBMB) (published in Enzyme Nomenclature 1992, Academic Press, San Diego, or a more recent revision thereof). The format represents a string of four numbers separated by full stops; up to three numbers starting from the end of the string may be replaced by dash "-" to indicate uncertain assignment. Symbols including an symbol "n". e.g "n". "n1" and so on, may be used in the last position instead of a number where the EC number is awaiting assignment. Please note that such incomplete EC numbers are not approved by NC-IUBMB.
6. 17.	Qual i fi er	ecotype
	Definition	a population within a given species displaying genetically based, phenotypic traits that reflect adaptation to a local habitat
	Value Format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>Columbia</insdqualifier_value></pre>
	Comment	an example of such a population is one that has adapted hairier than normal leaves as a response to an especially sunny habitat. 'Ecotype' is often applied to standard genetic stocks of Arabidopsis thaliana, but it can be applied to any sessile organism.

6. 18.	Qualifier	environmental_sample
	Definition	identifies sequences derived by direct molecular isolation from a bulk environmental DNA sample (by PCR with or without subsequent cloning of the product, DGGE, or other anonymous methods) with no reliable identification of the source organism. Environmental samples include clinical samples, gut contents, and other sequences from anonymous organisms that may be associated with a particular host. They do not include endosymbionts that can be reliably recovered from a particular host, organisms from a readily identifiable but uncultured field sample (e.g. many cyanobacteria), or phytoplasmas that can be reliably recovered from diseased plants (even though these cannot be grown in axenic culture)
	Value format	none
	Comment	used only with the source feature key; source feature keys containing the environmental_sample qualifier should also contain the isolation_source qualifier; a source feature including the environmental_sample qualifier must not include the strain qualifier.
6. 19.	Qualifier	exception
	Definition	indicates that the coding region cannot be translated using standard biological rules $% \left( 1\right) =\left( 1\right) \left( 1\right) \left($
	Value format	One of the following controlled vocabulary phrases:  RNA editing  rearrangement required for product  annotated by transcript or proteomic data
	Exampl e	<pre><insdqualifier_value>RNA editing</insdqualifier_value> <insdqualifier_value>rearrangement required for product</insdqualifier_value></pre>
	Comment	only to be used to describe biological mechanisms such as RNA editing; protein translation of a CDS with an exception qualifier will be different from the corresponding conceptual translation; must not be used where transl_except qualifier would be adequate, e.g. in case of stop codon completion use.
6. 20.	Qualifier	frequency
	Definition	frequency of the occurrence of a feature
	Value format	free text representing the proportion of a population carrying the feature expressed as a fraction (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>23/108</insdqualifier_value> <insdqualifier_value>1 in 12</insdqualifier_value> <insdqualifier_value>0.85</insdqualifier_value>
6. 21.	Qualifier	function
	Definition	function attributed to a sequence
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>essential for recognition of cofactor </insdqualifier_value></pre>
	Comment	The function qualifier is used when the gene name and/or product name do not convey the function attributable to a sequence.

6. 22.	Qualifier	gene
	Definition	symbol of the gene corresponding to a sequence region
	Valera Comment	Court Asset
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>ilvE</insdqualifier_value>
	Comment	Use gene qualifier to provide the gene symbol; use standard_name qualifier to provide the full gene name.
6. 23.	Qual i fi er	gene_synonym
	Definition	synonymous, replaced, obsolete or former gene symbol
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>Hox-3.3</insdqualifier_value> in a feature where the gene qualifier value is Hoxc6</pre>
	Comment	used where it is helpful to indicate a gene symbol synonym; when the gene_synonym qualifier is used, a primary gene symbol must always be indicated in a gene qualifier
6. 24.	Qual i fi er	germline
	Definition	the sequence presented has not undergone somatic rearrangement as part of an adaptive immune response; it is the unrearranged sequence that was inherited from the parental germline
	Value format	none
	Comment	germline qualifier must not be used to indicate that the source of the sequence is a gamete or germ cell; germline and rearranged qualifiers must not be used in the same source feature; germline and rearranged qualifiers must only be used for molecules that can undergo somatic rearrangements as part of an adaptive immune response; these are the T-cell receptor (TCR) and immunoglobulin loci in the jawed vertebrates, and the unrelated variable lymphocyte receptor (VLR) locus in the jawless fish (lampreys and hagfish); germline and rearranged qualifiers should not be used outside of the Craniata (taxid=89593)
- 0.5	2.110	
6. 25.	Qualifier	hapl ogroup
	Definition	name for a group of similar haplotypes that share some sequence variation. Haplogroups are often used to track migration of population groups.
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>H*</insdqualifier_value>
6. 26.	Qual i fi er	hapl otype
	Definition	name for a specific set of alleles that are linked together on the same physical chromosome. In the absence of recombination, each haplotype is inherited as a unit, and may be used to track gene flow in populations.
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)

Exampl e

<INSDQualifier\_value>Dw3 B5 Cw1 A1</INSDQualifier\_value>

6. 27.	Qual i fi er	host
	Definition	natural (as opposed to laboratory) host to the organism from which sequenced molecule was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>Homo sapiens</insdqualifier_value> <insdqualifier_value>Homo sapiens 12 year old girl</insdqualifier_value> <insdqualifier_value>Rhizobium NGR234</insdqualifier_value></pre>
6. 28.	Qual i fi er	i dentified_by
	Definition	name of the expert who identified the specimen taxonomically
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>John Burns</insdqualifier_value>
6. 29.	Qual i fi er	i sol ate
	Definition	individual isolate from which the sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>Patient #152</insdqualifier_value> <insdqualifier_value>DGGE band PSBAC-13</insdqualifier_value></pre>
6. 30.	Qual i fi er	i sol ati on_source
	Definition	describes the physical, environmental and/or local geographical source of the biological sample from which the sequence was derived
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Examples	<pre><insdqualifier_value>rumen isolates from standard Pelleted ration-fed steer #67</insdqualifier_value> <insdqualifier_value>permanent Antarctic sea ice</insdqualifier_value> <insdqualifier_value>denitrifying activated sludge from carbon_limited continuous reactor</insdqualifier_value></pre>
	Comment	used only with the source feature key; source feature keys containing an environmental_sample qualifier should also contain an isolation_source qualifier
6. 31.	Qualifier	l ab_host
	Definition	scientific name of the laboratory host used to propagate the source organism from which the sequenced molecule was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>Gallus gallus</insdqualifier_value> <insdqualifier_value>Gallus gallus embryo</insdqualifier_value> <insdqualifier_value>Escherichia coli strain DH5 alpha</insdqualifier_value> <insdqualifier_value>Homo sapiens HeLa cells</insdqualifier_value></pre>
	Comment	the full binomial scientific name of the host organism should be used when known;

extra conditional information relating to the host may also be included

6. 32.	Qualifier	l at_l on
	Definition	geographical coordinates of the location where the specimen was collected
	Value format	free text - degrees latitude and longitude in format "d[d.dddd] N S d[dd.dddd] W E" (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>47.94 N 28.12 W</insdqualifier_value> <insdqualifier_value>45.0123 S 4.1234 E</insdqualifier_value></pre>
6. 33.	Qual i fi er	macronuclear
0. 33.	Quai i i i er	macronuci ear
	Definition	if the sequence shown is DNA and from an organism which undergoes chromosomal differentiation between macronuclear and micronuclear stages, this qualifier is used to denote that the sequence is from macronuclear DNA
	Value format	none
6. 34.	0	
6. 34.	Qual i fi er	map
	Definition	genomic map position of feature
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>8q12-q13</insdqualifier_value>
6. 35.	Qual i fi er	mating_type
	Definition	mating type of the organism from which the sequence was obtained; mating type is used for prokaryotes, and for eukaryotes that undergo meiosis without sexually dimorphic gametes
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl es	<pre><insdqualifier_value>MAT-1</insdqualifier_value> <insdqualifier_value>plus</insdqualifier_value> <insdqualifier_value>-</insdqualifier_value> <insdqualifier_value>odd</insdqualifier_value> <insdqualifier_value>even</insdqualifier_value>"</pre>
	Comment	mating_type qualifier values male and female are valid in the prokaryotes, but not in the eukaryotes; for more information, see the entry for the sex qualifier.

6. 36.	Qual i fi er	mobile_element_type
	·	
	Definition	type and name or identifier of the mobile element which is described by the parent feature
		reature
	Value format	<mobile_element_type>[:<mobile_element_name>]</mobile_element_name></mobile_element_type>
		where <mobile_element_type> is one of the following:</mobile_element_type>
		transposon
		retrotransposon
		integron insertion sequence
		non-LTR retrotransposon
		SINE
		MI TE
		LINE
		other
	Example	<pre><insdqualifier_value>transposon: Tnp9</insdqualifier_value></pre>
	C	mildle allowed from the consideral or mildle allowed Control by only Wildle allowed
	Comment	mobile_element_type is permitted on mobile_element feature key only. Mobile element should be used to represent both elements which are currently mobile, and those
		which were mobile in the past. Value "other" for <mobile_element_type> requires a</mobile_element_type>
		<mobile_element_name></mobile_element_name>
6. 37.	Qual i fi er	mod_base
	Definition	abbreviation for a modified nucleotide base
	Value format	modified base abbreviation chosen from this Annex, Section 2
	Exampl e	<insdqualifier_value>m5c</insdqualifier_value>
		<insdqualifier_value>OTHER</insdqualifier_value>
	Comment	specific modified nucleotides not found in Section 2 of this Annex are annotated by
		entering OTHER as the value for the mod_base qualifier and including a note
		qualifier with the full name of the modified base as its value
6. 38.	Qual i fi er	mol_type
	Definition	molecule type of sequence
	Value format	One chosen from the following:
		genomic DNA
		genomic RNA
		mRNA t RNA
		rRNA
		other RNA
		other DNA
		transcribed RNA
		viral cRNA
		unassi gned DNA unassi gned RNA
		unassi gucu Ana
	Exampl e	<insdqualifier_value>genomic DNA</insdqualifier_value>
	-	<insdqualifier_value>other RNA</insdqualifier_value>
	Comment	mol_type qualifier is mandatory on the source feature key; the value "genomic DNA"
		does not imply that the molecule is nuclear (e.g., organelle and plasmid DNA must be described using "genomic DNA"); ribosomal RNA genes must be described using
		"genomic DNA"; "rRNA" must only be used if the ribosomal RNA molecule itself has
		been sequenced; values "other RNA" and "other DNA" must be applied to synthetic
		molecules, values "unassigned DNA", "unassigned RNA" must be applied where in vivo
		molecule is unknown.

6. 39.	Qual i fi er	ncRNA_cl ass
	Definition	a structured description of the classification of the non-coding RNA described by the $\operatorname{ncRNA}$ parent key
	Value format	TYPE where TYPE is one of the following controlled vocabulary terms or phrases: antisense_RNA
		autocatalytically_spliced_intron ribozyme hammerhead_ribozyme
		l ncRNA RNase_P_RNA
		RNase_MRP_RNA telomerase_RNA
		gui de_RNA
		s <mark>eg</mark> RNA rasi RNA
		scrna
		scaRNA si RNA
		pre_mi RNA
		mi RNA
		pi RNA snoRNA
		snRNA
		SRP_RNA
		vaul t_RNA Y_RNA
		other
	Exampl e	<pre><insdqualifier_value>autocatalytically_spliced_intron </insdqualifier_value> <insdqualifier_value>siRNA</insdqualifier_value></pre>
		<insdqualifier_value>scRNA</insdqualifier_value> <insdqualifier_value>other</insdqualifier_value>
	Comment	specific ncRNA types not yet in the ncRNA_class controlled vocabulary must be annotated by entering "other" as the ncRNA_class qualifier value, and providing a brief explanation of novel ncRNA_class in a note qualifier
6. 40.	Qual i fi er	note
	Definition	any comment or additional information
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>A comment about the feature</insdqualifier_value></pre>
6. 41.	Qualifier	number
	Definition	a number to indicate the order of genetic elements (e.g. $\blacksquare$ exons or introns) in the 5' to 3' direction
	Value format	free text (with no whitespace characters) (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>4</insdqualifier_value> <insdqualifier_value>6B</insdqualifier_value>
	Comment	text limited to integers, letters or combination of integers and/or letters represented as a data value that contains no whitespace characters; any additional terms should be included in a standard_name qualifier. Example: a number qualifier with a value of 2A and a standard_name qualifier with a value of "long"

6. 42.	Qual i fi er	operon
	Definition	name of the group of contiguous genes transcribed into a single transcript to which that feature belongs $% \left( 1\right) =\left( 1\right) \left( 1$
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>lac</insdqualifier_value>
6. 43.	Qual i fi er	organel l e
	Definition	type of membrane-bound intracellular structure from which the sequence was obtained
	Value format	One of the following controlled vocabulary terms and phrases: chromatophore hydrogenosome mitochondrion
		nucleomorph plastid mitochondrion: kinetoplast plastid: chloroplast plastid: api coplast plastid: chromoplast plastid: chromoplast plastid: cyanelle plastid: leucoplast plastid: proplastid
	Examples	<pre><insdqualifier_value>chromatophore</insdqualifier_value> <insdqualifier_value>hydrogenosome</insdqualifier_value> <insdqualifier_value>mitochondrion</insdqualifier_value> <insdqualifier_value>mitochondrion</insdqualifier_value> <insdqualifier_value>plastid</insdqualifier_value> <insdqualifier_value>plastid</insdqualifier_value> <insdqualifier_value>mitochondrion: kinetoplast</insdqualifier_value> <insdqualifier_value>plastid: chloroplast</insdqualifier_value> <insdqualifier_value>plastid: apicoplast</insdqualifier_value> <insdqualifier_value>plastid: chromoplast</insdqualifier_value> <insdqualifier_value>plastid: cyanelle</insdqualifier_value> <insdqualifier_value>plastid: leucoplast</insdqualifier_value> <insdqualifier_value>plastid: leucoplast</insdqualifier_value> <insdqualifier_value>plastid: leucoplast</insdqualifier_value> <insdqualifier_value>plastid: proplastid</insdqualifier_value></pre>
6. 44.	Qualifier	organi sm
	Definition	scientific name of the organism that provided the sequenced genetic material, if known, or the available taxonomic information if the organism is unclassified; or an indication that the sequence is a synthetic construct
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>Homo sapiens</insdqualifier_value></pre>

6. 45.	Qualifier	PCR_pri mers
	Definition	PCR primers that were used to amplify the sequence. A single PCR_primers qualifier should contain all the primers used for a single PCR reaction. If multiple forward or reverse primers are present in a single PCR reaction, multiple sets of fwd_name/fwd_seq or rev_name/rev_seq values will be present
	Value format	[fwd_name: XXX1, ]fwd_seq: xxxxx1, [fwd_name: XXX2, ]fwd_seq: xxxxx2, [rev_name: YYY1, ]rev_seq: yyyyyy1, [rev_name: YYY2, ]rev_seq: yyyyy2
	Exampl e	<pre><insdqualifier_value>fwd_name: C01P1, fwd_seq: ttgattttttggtcayccwgaagt,rev_name: C01R4, rev_seq: ccwvytardcctarraartgttg</insdqualifier_value> <insdqualifier_value>fwd_name: hoge1, fwd_seq: cgkgtgtatcttact, rev_name: hoge2, rev_seq: cg&lt;i&gt;gtgtatcttact</insdqualifier_value> <insdqualifier_value>fwd_name: C01P1, fwd_seq: ttgattttttggtcayccwgaagt, fwd_name: C01P2, fwd_seq: gatacacaggtcayccwgaagt, rev_name: C01R4, rev_seq: ccwvytardcctarraartgttg</insdqualifier_value></pre>
	Comment	fwd_seq and rev_seq are both mandatory; fwd_name and rev_name are both optional. Both sequences must be presented in $5^{\circ}>3^{\circ}$ order. The sequences must be given in the symbols from Section 1 of this Annex, except for the modified bases, which must be enclosed within angle brackets < >. In XML, the angle brackets < and > must be substituted with < and > since they are reserved characters in XML.
6. 46.	Qualifier	phenotype
	Definition	phenotype conferred by the feature, where phenotype is defined as a physical, biochemical or behavioural characteristic or set of characteristics
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>erythromycin resistance</insdqualifier_value></pre>
6. 47.	Qual i fi er	pl asmi d
	Definition	name of naturally occurring plasmid from which the sequence was obtained, where plasmid is defined as an independently replicating genetic unit that cannot be described by chromosome or segment qualifiers
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Example	<insdqualifier_value>pC589</insdqualifier_value>
6. 48.	Qual i fi er	pop_vari ant
J. 10.	Definition	name of subpopulation or phenotype of the sample from which the sequence was derived
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>pop1</insdqualifier_value> <insdqualifier_value>Bear Paw</insdqualifier_value>

6. 49.	Qual i fi er	product
	Definition	name of the product associated with the feature, e.g. $\blacksquare$ the mRNA of an mRNA feature, the polypeptide of a CDS, the mature peptide of a mat_peptide, etc.
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>trypsinogen</insdqualifier_value> (when qualifier appears in CDS feature) <insdqualifier_value>trypsin</insdqualifier_value> (when qualifier appears in mat_peptide feature) <insdqualifier_value>XYZ neural-specific transcript</insdqualifier_value> (when qualifier appears in mRNA feature)</pre>
6. 50.	Qual i fi er	protein_i d
	Definition	protein sequence identification number, an integer used in a sequence listing to designate the protein sequence encoded by the coding sequence identified in the corresponding CDS feature key and translation qualifier
	Value format	an integer greater than zero
	Exampl e	<i er_val="" fi="" i="" nsdqual="" ue="">89</i>
6. 51.	Qualifier	provi ral
	Definition	this qualifier is used to flag sequence obtained from a virus or phage that is integrated into the genome of another organism
	Value format	none
6. 52.	Qualifier	pseudo
	Definition	indicates that this feature is a non-functional version of the element named by the feature $\ensuremath{key}$
	Value format	none
	Comment	The qualifier pseudo should be used to describe non-functional genes that are not formally described as pseudogenes, e.g. CDS has no translation due to other reasons than pseudogenization events. Other reasons may include sequencing or assembly errors. In order to annotate pseudogenes the qualifier pseudogene must be used, indicating the TYPE of pseudogene.

6. 53. Qual i fi er pseudogene Definition indicates that this feature is a pseudogene of the element named by the feature key Value format TYPE where TYPE is one of the following controlled vocabulary terms or phrases: processed unprocessed uni tarv allelic unknown <INSDQualifier\_value>processed</INSDQualifier\_value> Exampl e <INSDQualifier\_value>unprocessed</INSDQualifier\_value> <INSDQualifier\_value>unitary</INSDQualifier\_value> <INSDQualifier\_value>allelic</INSDQualifier\_value> <INSDQualifier\_value>unknown</INSDQualifier\_value> Comment Definitions of TYPE values: processed - the pseudogene has arisen by reverse transcription of a mRNA into cDNA, followed by reintegration into the genome. Therefore, it has lost any intron/exon structure, and it might have a pseudo-polyA-tail. unprocessed - the pseudogene has arisen from a copy of the parent gene by duplication followed by accumulation of random mutations. The changes, compared to their functional homolog, include insertions, deletions, premature stop codons, frameshifts and a higher proportion of non-synonymous versus synonymous substitutions. unitary - the pseudogene has no parent. It is the original gene, which is functional is some species but disrupted in some way (indels, mutation, recombination) in another species or strain. allelic - a (unitary) pseudogene that is stable in the population but importantly it has a functional alternative allele also in the population. i.e., one strain may have the gene, another strain may have the pseudogene. MHC haplotypes have allelic pseudogenes. unknown - the submitter does not know the method of pseudogenization.

#### 6.54. Qualifier

#### rearranged

Definition

the sequence presented in the entry has undergone somatic rearrangement as part of an adaptive immune response; it is not the unrearranged sequence that was inherited from the parental germline

Value format

none

Comment

The rearranged qualifier must not be used to annotate chromosome rearrangements that are not involved in an adaptive immune response; germline and rearranged qualifiers must not be used in the same source feature; germline and rearranged qualifiers must only be used for molecules that can undergo somatic rearrangements as part of an adaptive immune response; these are the T-cell receptor (TCR) and immunoglobulin loci in the jawed vertebrates, and the unrelated variable lymphocyte receptor (VLR) locus in the jawless fish (lampreys and hagfish); germline and rearranged qualifiers should not be used outside of the Craniata (taxid=89593)

Qual i fi er

6. 55.

a structured description of the classification of recombination hotspot region Definition within a sequence Value format TYPE where TYPE is one of the following controlled vocabulary terms or phrases: mei otic mitotic non\_allelic\_homologous chromosome breakpoint other <INSDQualifier\_value>meiotic</INSDQualifier\_value> Exampl e <I NSDQual i fi er\_val ue>chromosome\_breakpoi nt</I NSDQual i fi er\_val ue> Comment specific recombination classes not yet in the recombination\_class controlled vocabulary must be annotated by entering "other" as the recombination\_class  $qualifier\ value\ and\ providing\ a\ brief\ explanation\ of\ the\ novel\ recombination\_class$ in a note qualifier 6. 56. Qual i fi er regulatory\_class Definition a structured description of the classification of transcriptional, translational,  $replicational \ and \ chromatin \ structure \ related \ regulatory \ elements \ in \ a \ sequence$ Value format TYPE where TYPE is one of the following controlled vocabulary terms or phrases: attenuator CAAT\_si gnal  ${\tt DNase\_I\_hypersensitive\_site}$ enhancer\_bl ocki ng\_el ement GC\_si gnal imprinting\_control\_region i nsul ator locus control region matrix\_attachment\_region mi nus\_35\_si gnal mi nus\_10\_si gnal pol yA\_si gnal \_sequence promoter recoding\_stimulatory\_region replication\_regulatory\_region response\_el ement ri bosome\_bi ndi ng\_si te ri boswi tch silencer TATA\_box termi nator transcriptional\_cis\_regulatory\_region other Example <INSDQualifier\_value>promoter</INSDQualifier\_value> <INSDQualifier\_value>enhancer</INSDQualifier\_value> <INSDQualifier\_value>ribosome\_binding\_site</INSDQualifier\_value> Comment specific regulatory classes not yet in the regulatory\_class controlled vocabulary must be annotated by entering "other" as the regulatory\_class qualifier value and  $providing \ a \ brief \ explanation \ of \ the \ novel \ regulatory\_class \ in \ a \ note \ qualifier$ 

recombination\_class

6. 57.	Qualifier	replace
	Definition	indicates that the sequence identified in a feature's location is replaced by the sequence shown in the qualifier's value; if no sequence (i.e., no value) is contained within the qualifier, this indicates a deletion
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>a</insdqualifier_value> <insdqualifier_value></insdqualifier_value> - for a deletion</pre>
6. 58.	Qualifier	ri bosomal_sli ppage
	Definition	during protein translation, certain sequences can program ribosomes to change to an alternative reading frame by a mechanism known as ribosomal slippage
	Value format	none
	Comment	a join operator, e.g. : [join(4861784,17874810)] must be used in the CDS feature location to indicate the location of ribosomal_slippage
6. 59.	Qualifier	rpt_family
0. 00.	Definition	type of repeated sequence; "Alu" or "Kpn", for example
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>Alu</insdqualifier_value>

Qual i fi er rpt\_type Definition structure and distribution of repeated sequence Value format One of the following controlled vocabulary terms or phrases: di rect inverted fl anki ng nested termi nal di spersed long\_terminal\_repeat non\_ltr\_retrotransposon\_polymeric\_tract centromeri c\_repeat tel omeri c\_repeat x\_el ement\_combi natori al \_repeat y\_pri me\_el ement other Exampl e <INSDQualifier\_value>inverted</INSDQualifier\_value> <INSDQualifier\_value>long\_terminal\_repeat</INSDQualifier\_value> Comment Definitions of the values:  $tandem\ -\ a\ repeat\ that\ exists\ adjacent\ to\ another\ in\ the\ same\ orientation;$ direct - a repeat that exists not always adjacent but is in the same orientation; inverted - a repeat pair occurring in reverse orientation to one another on the same molecule; flanking - a repeat lying outside the sequence for which it has functional significance (eg. transposon insertion target sites); nested - a repeat that is disrupted by the insertion of another element; dispersed - a repeat that is found dispersed throughout the genome; terminal - a repeat at the ends of and within the sequence for which it has  $functional \ significance \ (eg. \ transposon \ LTRs);$ long\_terminal\_repeat - a sequence directly repeated at both ends of a defined sequence, of the sort typically found in retroviruses;  $non\_ltr\_retrotransposon\_polymeric\_tract - a polymeric tract, such as poly(dA),$ within a non LTR retrotransposon;  $centromeri\,c\_repeat\ \hbox{--a repeat region found within the modular centromere};$ telomeric\_repeat - a repeat region found within the telomere;  $x_{el} = ment_{ombinatorial_repeat} - a$  repeat region located between the X element and the telomere or adjacent Y' element;  $y_prime_element$  - a repeat region located adjacent to telomeric repeats or Xelement combinatorial repeats, either as a single copy or tandem repeat of two to four copies; other - a repeat exhibiting important attributes that cannot be described by other values.

6.61. Qualifier rpt\_unit\_range

Definition location of a repeating unit expressed as a range

dots) of a repeating unit

Example <INSDQualifier\_value>202..245</INSDQualifier\_value>

Comment used to indicate the base range of the sequence that constitutes a repeating unit

within the region specified by the feature keys oriT and  ${\tt repeat\_region}.$ 

6. 62.	Qual i fi er	rpt_uni t_seq
	Definition	identity of a repeat sequence
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>aagggc</insdqualifier_value> <insdqualifier_value>ag(5)tg(8)</insdqualifier_value> <insdqualifier_value>(AAAGA)6(AAAA)1(AAAGA)12</insdqualifier_value></pre>
	Comment	used to indicate the literal sequence that constitutes a repeating unit within the region specified by the feature keys oriT and repeat_region
6. 63.	Qual i fi er	satellite
	Definition	identifier for a satellite DNA marker, compose of many tandem repeats (identical or related) of a short basic repeated unit
	Value format	<pre><satellite_type>[:<class>][ <identifier>] - where <satellite_type> is one of the following: satellite; microsatellite; minisatellite</satellite_type></identifier></class></satellite_type></pre>
	Exampl e	<pre><insdqualifier_value>satellite: S1a</insdqualifier_value> <insdqualifier_value>satellite: alpha</insdqualifier_value> <insdqualifier_value>satellite: gamma III</insdqualifier_value> <insdqualifier_value>microsatellite: DC130</insdqualifier_value></pre>
	Comment	many satellites have base composition or other properties that differ from those of the rest of the genome that allows them to be identified.
6. 64.	Qual i fi er	segment
	Definition	name of viral or phage segment sequenced
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>6</insdqualifier_value>
6. 65.	Qual i fi er	serotype
J. JJ.	Definition	••
	net i ili ci oli	serological variety of a species characterized by its antigenic properties
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>B1</insdqualifier_value>
	Comment	used only with the source feature key; the Bacteriological Code recommends the use of the term 'serovar' instead of 'serotype' for the prokaryotes; see the International Code of Nomenclature of Bacteria (1990 Revision) Appendix 10.B "Infraspecific Terms".

6. 66.	Qual i fi er	serovar
	Definition	serological variety of a species (usually a prokaryote) characterized by its antigenic properties
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>0157: H7</insdqualifier_value>
	Comment	used only with the source feature key; the Bacteriological Code recommends the use of the term 'serovar' instead of 'serotype' for prokaryotes; see the International Code of Nomenclature of Bacteria (1990 Revision) Appendix 10. B "Infraspecific Terms".
6. 67.	Qual i fi er	sex
	Definition	sex of the organism from which the sequence was obtained; sex is used for eukaryotic organisms that undergo meiosis and have sexually dimorphic gametes
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl es	<pre><insdqualifier_value>female</insdqualifier_value> <insdqualifier_value>male</insdqualifier_value> <insdqualifier_value>hermaphrodite</insdqualifier_value> <insdqualifier_value>hermaphrodite</insdqualifier_value> <insdqualifier_value>bisexual</insdqualifier_value> <insdqualifier_value>bisexual</insdqualifier_value> <insdqualifier_value>asexual</insdqualifier_value> <insdqualifier_value>monoecious</insdqualifier_value> [or monecious] <insdqualifier_value>dioecious</insdqualifier_value> [or diecious]</pre>
	Comment	The sex qualifier should be used (instead of mating_type qualifier) in the Metazoa, Embryophyta, Rhodophyta & Phaeophyceae; mating_type qualifier should be used (instead of sex qualifier) in the Bacteria, Archaea & Fungi; neither sex nor mating_type qualifiers should be used in the viruses; outside of the taxa listed above, mating_type qualifier should be used unless the value of the qualifier is taken from the vocabulary given in the examples above
6. 68.	Qual i fi er	standard_name
	Definition	accepted standard name for this feature
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>dotted</insdqualifier_value></pre>
	Comment	use standard_name qualifier to give full gene name, but use gene qualifier to give gene symbol (in the above example gene qualifier value is Dt).
6. 69.	Qual i fi er	strain
	Definition	strain from which sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>BALB/c</insdqualifier_value>
	Comment	feature entries including a strain qualifier must not include the environmental_sample qualifier

6. 70.	Qual i fi er	sub_cl one
	Definition	sub-clone from which sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>l ambda- hIL7. 20g</insdqualifier_value></pre>
	Comment	a source feature must not contain more than one sub_clone qualifier; to indicate that the sequence was obtained from multiple sub_clones, multiple sources may be further described using the feature key "misc_feature" and the qualifier "note"
6. 71.	Qualifier	sub_species
	Definition	name of sub-species of organism from which sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>lactis</insdqualifier_value>
6. 72.	Qualifier	sub_strain
	Definition	name or identifier of a genetically or otherwise modified strain from which sequence was obtained, derived from a parental strain (which should be annotated in the strain qualifier). sub_strain from which sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>abis</insdqualifier_value>
	Comment	must be accompanied by a strain qualifier in a source feature; if the parental strain is not given, the modified strain should be annotated in the strain qualifier instead of sub_strain. For example, either a strain qualifier with the value K-12 and a substrain qualifier with the value MG1655 or a strain qualifier with the value MG1655
6. 73.	Qualifier	tag_pepti de
	Definition	base location encoding the polypeptide for proteolysis tag of tmRNA and its termination $\operatorname{codon}$
	Value format	<pre><base_range> - where <base_range> provides the first and last base (separated by two dots) of the location for the proteolysis tag</base_range></base_range></pre>
	Exampl e	<pre><insdqualifier_value>90 122</insdqualifier_value></pre>
	Comment	it is recommended that the amino acid sequence corresponding to the tag_peptide be annotated by describing a 5' partial CDS feature; e.g. $\blacksquare$ CDS with a location of <90122
6. 74.	Qual i fi er	tissue_lib
	Definition	tissue library from which sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<pre><insdqualifier_value>tissue library 772</insdqualifier_value></pre>

	0 110	
6. 75.	Qual i fi er	tissue_type
	Definition	tissue type from which the sequence was obtained
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>liver</insdqualifier_value>
6 76	Qualifian	trongl except
6. 76.	Qualifier	transl_except
	Definition	translational exception: single codon the translation of which does not conform to genetic code defined by organism or transl_table.
	Value format	(pos:location, aa: <ami no_acid="">) where <ami no_acid=""> is the three letter abbreviation for the ami no acid coded by the codon at the base_range position</ami></ami>
	Exampl e	<pre><insdqualifier_value>(pos: 213215, aa: Trp) </insdqualifier_value></pre>
		<pre><insdqualifier_value>(pos: 462 464, aa: OTHER) </insdqualifier_value> <insdqualifier_value>(pos: 1017, aa: TERM) </insdqualifier_value></pre>
		<pre></pre> <pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre><!--</th--></pre></pre>
	Comment	if the amino acid is not one of the specific amino acids listed in Section 3 of this Annex, use OTHER as <amino_acid> and provide the name of the unusual amino acid in a note qualifier; for modified amino-acid selenocysteine use three letter abbreviation 'Sec' (one letter symbol 'U' in amino-acid sequence) for <amino_acid>; for modified amino-acid pyrrolysine use three letter abbreviation 'Pyl' (one letter symbol '0' in amino-acid sequence) for <amino_acid>; for partial termination codons where TAA stop codon is completed by the addition of 3' A residues to the mRNA either a single base_position or a base_range is used for the location, see the third and fourth examples above, in conjunction with a note qualifier indicating 'stop codon completed by the addition of 3' A residues to the mRNA'.</amino_acid></amino_acid></amino_acid>
6. 77.	Qualifier	transl_table
	Definition	definition of genetic code table used if other than universal or standard genetic code table. Tables used are described in this Annex
	Value format	<pre><integer> where <integer> is the number assigned to the genetic code table</integer></integer></pre>
	Exampl e	$<\!$ INSDQualifier_value>3 - example where the yeast mitochondrial code is to be used
	Comment	if the transl_table qualifier is not used to further annotate a CDS feature key, then the CDS is translated using the Standard Code (i.e. Universal Genetic Code). Genetic code exceptions outside the range of specified tables are reported in transl_except qualifiers.
6. 78.	Qual i fi er	trans_splicing
	Definition	indicates that exons from two RNA molecules are ligated in intermolecular reaction to form mature $\ensuremath{RNA}$
	Value format	none
	Comment	should be used on features such as CDS, mRNA and other features that are produced as a result of a trans-splicing event. This qualifier must be used only when the splice event is indicated in the "join" operator, e.g. join(complement(6961169724), 139856140087) in the feature location

6. 79.	Qual i fi er	translation
	Definition	one-letter abbreviated amino acid sequence derived from either the standard (or universal) genetic code or the table as specified in a transl_table qualifier and as determined by an exception in the transl_except qualifier
	Value format	contiguous string of one-letter amino acid abbreviations from Section 3 of this Annex, "X" is to be used for AA exceptions.
	Exampl e	<pre><insdqualifier_value>MASTFPPWYRGCASTPSLKGLIMCTW</insdqualifier_value></pre>
	Comment	to be used with CDS feature only; must be accompanied by protein_id qualifier when the translation product contains four or more specifically defined amino acids; see transl_table for definition and location of genetic code Tables; only one of the qualifiers translation, pseudo and pseudogene are permitted to further annotate a CDS feature.
6. 80.	Qual i fi er	variety
	Definition	variety (= varietas, a formal Linnaean rank) of organism from which sequence was derived.
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>insularis</insdqualifier_value>
	Comment	use the cultivar qualifier for cultivated plant varieties, i.e., products of artificial selection; varieties other than plant and fungal variatas should be annotated via a note qualifier, e.g. with the value <li>INSDQualifier_value&gt;breed: Cukorova</li>

## SECTION 7: FEATURE KEYS FOR AMINO ACID SEQUENCES

This section contains the list of allowed feature keys to be used for amino acid sequences. The feature keys are listed in alphabetic order.

7. 1.	Feature Key	ACT_SITE
	Definition	Amino acid(s) involved in the activity of an enzyme
	Optional qualifiers	NOTE
	Comment	Each amino acid residue of the active site must be annotated separately with the ACT_SITE feature key. The corresponding amino acid residue number must be provided as the location descriptor in the feature location element.
7. 2.	Feature Key	BI NDI NG
	Definition	Binding site for any chemical group (co-enzyme, prosthetic group, etc.). The chemical nature of the group is indicated in the NOTE qualifier
	Mandatory qualifiers	NOTE
	Comment	Examples of values for the "NOTE" qualifier: "Heme (covalent)" and "Chloride." Where appropriate, the features keys CA_BIND, DNA_BIND, METAL, and NP_BIND should be used rather than BINDING.
7. 3.	Feature Key	CA_BI ND
	Definition	Extent of a calcium-binding region
	Optional qualifiers	NOTE
7. 4.	Feature Key	САКВОНУД
	Definition	Glycosylation site
	Mandatory qualifiers	NOTE
	Comment	This key describes the occurrence of the attachment of a glycan (mono- or polysaccharide) to a residue of the protein. The type of linkage (C-, N- or 0-linked) to the protein is indicated in the "NOTE" qualifier. If the nature of the reducing terminal sugar is known, its abbreviation is shown between parentheses. If three dots '' follow the abbreviation this indicates an extension of the carbohydrate chain. Conversely no dots means that a monosaccharide is linked. Examples of values used in the "NOTE" qualifier: N-linked (GlcNAc); 0-linked (GlcNAc); 0-linked (GlcNAc); 0-linked (GlcNAc).
7. 5.	Feature Key	CHAI N
	Definition	Extent of a polypeptide chain in the mature protein
	Optional qualifiers	NOTE
7. 6.	Feature Key	COI LED
	Definition	Extent of a coiled-coil region
	Optional qualifiers	NOTE

7. 7.	Feature Key	COMPBIAS
	Definition	
	berrin cron	Extent of a compositionally biased region
	Optional qualifiers	NOTE
7.0	Б	CONTRICT
7. 8.	Feature Key	CONFLICT
	Definition	Different sources report differing sequences
	Optional qualifiers	NOTE
	Comment	Examples of values for the "NOTE" qualifier: Missing; K -> Q; GSDSE -> RIRLR; V -> A.
7. 9.	Feature Key	CROSSLNK
	Definition	Post translationally formed amino acid bonds
	Mandatory qualifiers	NOTE
	Comment	Covalent linkages of various types formed between two proteins (interchain cross-links) or between two parts of the same protein (intrachain cross-links); except for cross-links formed by disulfide bonds, for which the "DISULFID" feature key is to be used. For an interchain cross-link, the location descriptor in the feature location element is the residue number of the amino acid cross-linked to the other protein. For an intrachain cross-link, the location descriptors in the feature location element are the residue numbers of the cross-linked amino acids in conjunction with the "join" location operator, e.g. "join(42,50)." The NOTE qualifier indicates the nature of the cross-link; at least specifying the name of the conjugate and the identity of the two amino acids involved. Examples of values for the "NOTE" qualifier: "Isoglutamyl cysteine thioester (Cys-Gln);" "Betamethyllanthionine (Cys-Thr);" and "Glycyl lysine isopeptide (Lys-Gly) (interchain with G-Cter in ubiquitin)"
7. 10.	Feature Key	DI SULFI D
	Definition	Di sul fi de bond
	Mandatory qualifiers	NOTE
	Comment	For an interchain disulfide bond, the location descriptor in the feature location element is the residue number of the cysteine linked to the other protein. For an intrachain cross-link, the location descriptors in the feature location element are the residue numbers of the linked cysteines in conjunction with the "join" location operator, e.g. "join(42,50)". For interchain disulfide bonds, the NOTE qualifier indicates the nature of the cross-link, by identifying the other protein, for example, "Interchain (between A and B chains)"
7. 11.	Feature Key	DNA_BI ND
	Definition	Extent of a DNA-binding region
	Mandatory qualifiers	NOTE
	Comment	The nature of the DNA-binding region is given in the NOTE qualifier. Examples of values for the "NOTE" qualifier: "Homeobox" and "Myb 2"
7. 12.	Feature Key	DOMAI N
	Definition	Extent of a domain, which is defined as a specific combination of secondary structures organized into a characteristic three-dimensional structure or fold

	Mandatory qualifiers	NOTE
	Comment	The domain type is given in the NOTE qualifier. Where several copies of a domain are present, the domains are numbered. Examples of values for the "NOTE" qualifier: "Ras-GAP" and "Cadherin 1"
7. 13.	Feature Key	HELIX
7. 15.	Definition	
	Delinicion	Secondary structure: Helices, for example, Alpha-helix; 3(10) helix; or Pi-helix
	Optional qualifiers	NOTE
	Comment	This feature is used only for proteins whose tertiary structure is known. Only three types of secondary structure are specified: helices (key HELIX), beta-strands (key STRAND) and turns (key TURN). Residues not specified in one of these classes are in a 'loop' or 'random-coil' structure.
7. 14.	Feature Key	I NI T_MET
7. 14.	·	Initiator methionine
	Definition	Initiator methionine
	Optional qualifiers	NOTE
	Comment	The location descriptor in the feature location element is "1". This feature key indicates the N-terminal methionine is cleaved off. This feature is not used when the initiator methionine is not cleaved off.
7. 15.	Feature Key	I NTRAMEM
	Definition	Extent of a region located in a membrane without crossing it
	Optional qualifiers	NOTE
7. 16.	Feature Key	LIPID
	Definition	Covalent binding of a lipid moiety
	Mandatanu muali fi ana	NOTE
	Mandatory qualifiers	NOTE
	Comment	The chemical nature of the bound lipid moiety is given in the NOTE qualifier, indicating at least the name of the lipidated amino acid. Examples of values for the "NOTE" qualifier: "N-myristoyl glycine"; "GPI-anchor amidated serine" and "S-diacylglycerol cysteine."
7. 17.	Feature Key	METAL
	Definition	Binding site for a metal ion.
	20111111011	Emaily of the Total and Total
	Mandatory qualifiers	NOTE
	Comment	The NOTE qualifier indicates the nature of the metal. Examples of values for the "NOTE" qualifier: "Iron (heme axial ligand)" and "Copper".

7. 18.	Feature Key	MOD_RES
	Definition	Posttranslational modification of a residue
	Mandatory qualifiers	NOTE
	Comment	The chemical nature of the modified residue is given in the NOTE qualifier, indicating at least the name of the post-translationally modified amino acid. If the modified amino acid is listed in Section 4 of this Annex, the abbreviation may be used in place of the the full name. Examples of values for the "NOTE" qualifier: "N-acetylalanine"; "3-Hyp"; and "MeLys" or "N-6-methyllysine"
7. 19.	Feature Key	MOTIF
	Definition	Short (up to 20 amino acids) sequence motif of biological interest
	Optional qualifiers	NOTE
7. 20.	Feature Key	MUTAGEN
	Definition	Site which has been experimentally altered by mutagenesis
	Optional qualifiers	NOTE
7. 21.	Feature Key	NON_STD
	Definition	Non-standard amino acid
	Optional qualifiers	NOTE
	Comment	This key describes the occurrence of non-standard amino acids selenocysteine (U) and pyrrolysine (O) in the amino acid sequence.
7. 22.	Feature Key	NON_TER
	Definition	The residue at an extremity of the sequence is not the terminal residue
	Optional qualifiers	NOTE
	Comment	If applied to position 1, this means that the first position is not the N-terminus of the complete molecule. If applied to the last position, it means that this position is not the C-terminus of the complete molecule.
7. 23.	Feature Key	NP_BI ND
	Definition	Extent of a nucleotide phosphate-binding region
	Mandatory qualifiers	NOTE
	Comment	The nature of the nucleotide phosphate is indicated in the NOTE qualifier. Examples of values for the "NOTE" qualifier: "ATP" and "FAD".
7. 24.	Feature Key	PEPTI DE
	Definition	Extent of a released active peptide
	Optional qualifiers	NOTE

7. 25.	Feature Key	PROPEP
	Definition	Extent of a propeptide
	Optional qualifiers	NOTE
7. 26.	Feature Key	REGION
	Definition	Extent of a region of interest in the sequence
	Optional qualifiers	NOTE
7. 27.	Feature Key	REPEAT
	Definition	Extent of an internal sequence repetition
	Optional qualifiers	NOTE
7. 28.	Feature Key	SI GNAL
	Definition	Extent of a signal sequence (prepeptide)
	Optional qualifiers	NOTE
7. 29.	Feature Key	SITE
	Definition	Any interesting single amino-acid site on the sequence that is not defined by
		another feature key. It can also apply to an amino acid bond which is represented by the positions of the two flanking amino acids
	Mandatory qualifier	NOTE
	Comment	When SITE is used to annotate a modified amino acid the value for the qualifier "NOTE" must either be an abbreviation set forth in Section 4 of this Annex, or the complete, unabbreviated name of the modified amino acid.
7. 30.	Feature Key	SOURCE
	Definition	Identifies the source of the sequence; this key is mandatory; every sequence will have a single SOURCE feature spanning the entire sequence
	Mandatory qualifiers	MOL_TYPE ORGANISM
	Optional qualifiers	NOTE
7. 31.	Feature Key	STRAND
	Definition	Secondary structure: Beta-strand; for example Hydrogen bonded beta-strand or residue in an isolated beta-bridge
	Optional qualifiers	NOTE
	Comment	This feature is used only for proteins whose tertiary structure is known. Only three types of secondary structure are specified: helices (key HELIX), beta-strands (key STRAND) and turns (key TURN). Residues not specified in one of these classes are in a 'loop' or 'random-coil' structure.

7. 32.	Feature Key	TOPO_DOM
	Definition	Topologi cal domai n
	Optional qualifiers	NOTE
7. 33.	Feature Key	TRANSMEM
	Definition	Extent of a transmembrane region
	Optional qualifiers	NOTE
7. 34.	Feature Key	TRANSIT
	Definition	Extent of a transit peptide (mitochondrion, chloroplast, thylakoid, cyanelle, peroxisome etc.)
	Optional qualifiers	NOTE
7. 35.	Feature Key	TURN
	Definition	Secondary structure Turns, for example, H-bonded turn (3-turn, 4-turn or 5-turn)
	Optional qualifiers	NOTE
	Comment	This feature is used only for proteins whose tertiary structure is known. Only three types of secondary structure are specified: helices (key HELIX), beta-strands (key STRAND) and turns (key TURN). Residues not specified in one of these classes are in a 'loop' or 'random-coil' structure.
7. 36.	Feature Key	UNSURE
	Definition	Uncertainties in the sequence
	Optional qualifiers	NOTE
	Comment	Used to describe $\operatorname{region}(s)$ of an amino acid sequence for which the authors are unsure about the sequence presentation.
7. 37.	Feature Key	VARIANT
	Definition	Authors report that sequence variants exist
	Optional qualifiers	NOTE
7. 38.	Feature Key	VAR_SEQ
	Definition	Description of sequence variants produced by alternative splicing, alternative promoter usage, alternative initiation and ribosomal frameshifting
	Optional qualifiers	NOTE

7	′. 39.	Feature Key	ZN_FI NG
		Definition	Extent of a zinc finger region
		Mandatory qualifiers	NOTE
		Comment	The type of zinc finger is indicated in the NOTE qualifier. For example: "GATA-
			type" and "NR C4-type"

### SECTION 8: QUALIFIERS FOR AMINO ACID SEQUENCES

This section contains the list of allowed qualifiers to be used for amino acid sequences.

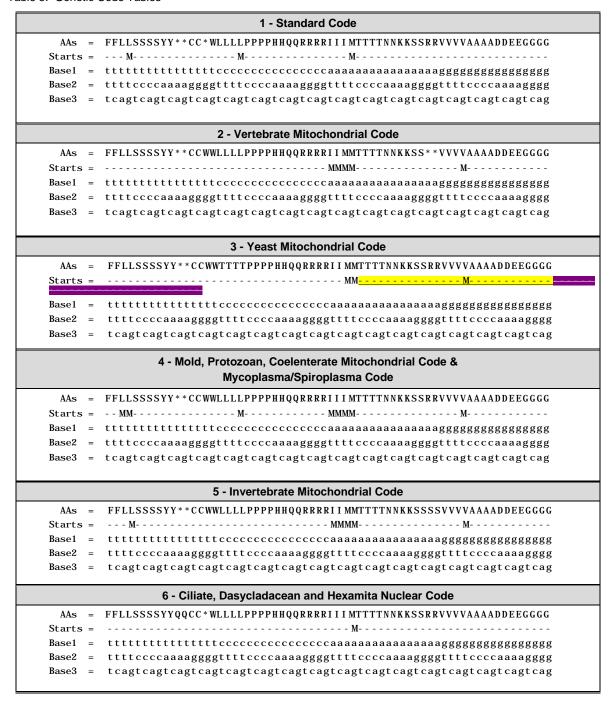

PLEASE NOTE: Any qualifier value provided for a qualifier with a "free text" value format may require translation for National/Regional procedures.

8. 1.	Qual i fi er	MOL_TYPE
	Definition	In vivo molecule type of sequence
	Value format	protein
	Exampl e	<pre><insdqualifier_value>protein</insdqualifier_value></pre>
	Comment	The "MOL_TYPE" qualifier is mandatory on the SOURCE feature key.
8. 2.	Qual i fi er	NOTE
	Definition	Any comment or additional information
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Example	<pre><insdqualifier_value>Heme (covalent)</insdqualifier_value></pre>
	Comment	The "NOTE" qualifier is mandatory for the feature keys: BINDING; CARBOHYD; CROSSLNK; DISULFID; DNA_BIND; DOMAIN; LIPID; METAL; MOD_RES; NP_BIND and ZN_FING
8. 3.	Qual i fi er	ORGANI SM
	Definition	Scientific name of the organism that provided the peptide
	Value format	free text (NOTE: this value may require translation for National/Regional procedures)
	Exampl e	<insdqualifier_value>Homo sapiens</insdqualifier_value>
	Comment	The "ORGANISM" qualifier is mandatory for the SOURCE feature key.

#### SECTION 9: GENETIC CODE TABLES

Table 5 reproduces Genetic Code Tables to be used for translating coding sequences. The value for the trans\_table qualifier is the number assigned to the corresponding genetic code table. Where a CDS feature is described with a translation qualifier but not a transl\_table qualifier, the 1 - Standard Code is used by default for translation. (Note: Genetic code tables 7, 8, 15, and 17 to 20 do not exist, therefore these numbers do not appear in Table 5.)

Table 5: Genetic Code Tables
