## e-PVP Modules Blockchain for PVP

September 28, 2021

- Context
- Proposed solution
- Challenges
- Timelines

#### Introduction

- Plant Variety Protection (PVP) applications are examined and granted by <u>authorities of</u> <u>members</u> of the International Union for the Protection of New Varieties of Plants (UPOV).
- UPOV is not a receiving office

#### Goals

Digitalize the application process (filing, examination, Grant, renewal): automate and make process easier to monitor by applicants and PVP offices

Notify applicants about any status change: improve communication and transparency within the process.

Integrate PVP Office business workflow: be flexible and be in line with each PVP Office practice

UPOV PRISMA must not become a monolith: distributed architecture

Meet each PVP office needs in terms of infrastructure (IAAS) and software (SAAS) : distributed governance

## Distributed Ledgers Benefits

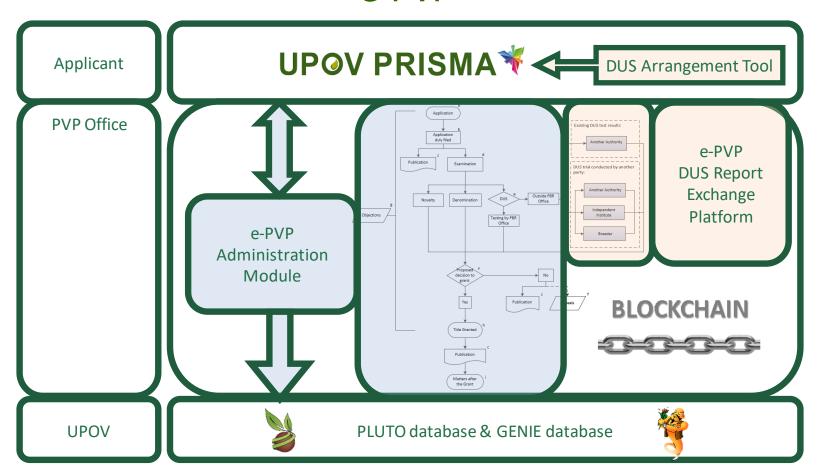

- Efficient: Changes by any participant (PVP office) with the necessary permission to modify the ledger are immediately reflected in all copies of the ledger.
- Robust: in rejecting unauthorised changes, so corrupting the ledger is extremely difficult.
- Transparent: the full history can be seen by the different parties.

- Timelines

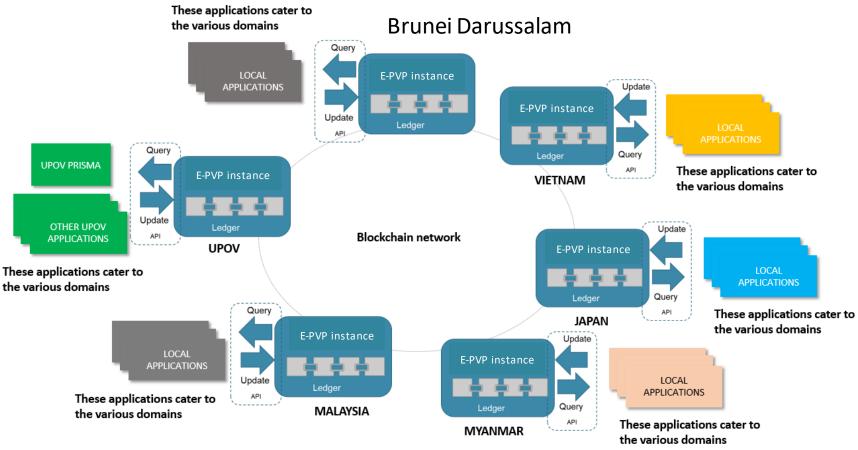

#### e-PVP

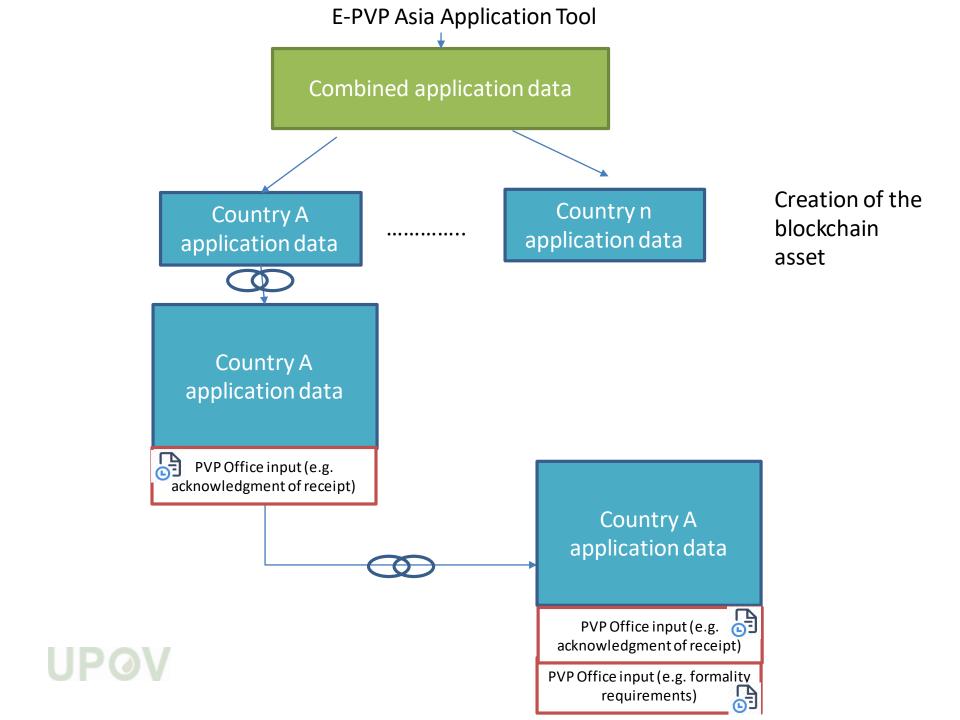

# Blockchain build on private distributed ledgers e-pvp Asia case

- Context
- Proposed solution
- Challenges
- Timelines

### Challenges

- Compatibility with other systems: PVP offices,
   Other international organizations, applicants,
   agents
- Managed transparency: not the full history can be shared with the applicants
- Scalabilty:
  - Addition of new nodes
  - Customization

- Timelines

#### **Timelines**

Proposed time	Activities
October 2021	<ul> <li>Test campaign for PVP offices (feedback)</li> <li>Identify applicants/breeders to join the test campaign</li> </ul>
November 2021	<ul> <li>Test campaign for applicants/breeders (receive feedback)</li> </ul>
First half of 2022	• e-PVP Asia operational (Prototype 1)
